

MelrosePMC

Private. Media. Cloud.

MelrosePMC Cloud Hosting Overview

MelrosePMC is built from the ground up to support collaborative editorial workflows under a reserved-use billing model

- You pay one price no matter how much you use
- No per-second billing models to worry about
- No data egress fees
- No long-term contract requirements

Co-location

Allows you the flexibility to use equipment you already own while still benefiting from the secure and resilient data center infrastructure we manage on your behalf.

You always pay an agreed price that does not change no matter how much you use.

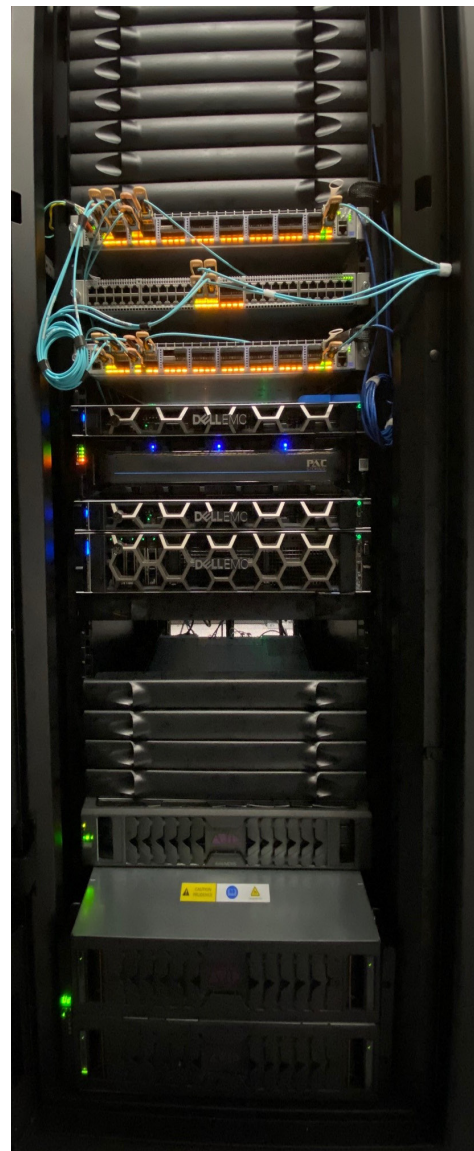

Leverage the value of existing or newly purchased equipment while still taking advantage of remote editorial workflows enabled by a cloud architecture.

MelrosePMC can provision and deploy Virtual Workstations on Demand on a pay-as-you-go basis whether you prefer OPEX or CAPEX, owning or housing your rentals.

MelrosePMC also offers you the ability to scale

- Physically or virtually
- More bandwidth
- More remote workstations
- More support resources

MelroseINC can source and install new equipment you purchase outright, saving you money over time.
